### EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Mr. Guiliana on September 20, 2006.

The application has been amended as follows:

Claims 1-8 have been canceled.

Claim 9 has been replaced by -- 9. An engine comprising an engine body defining a combustion chamber therein, an induction system configured to guide air to the combustion chamber, an air metering device configured to meter an amount of air flowing through the induction system toward the engine body, the air metering device including a mechanical interface connectable to a mechanical power output request device so as to allow the air metering device to be adjusted mechanically between its maximum and minimum operating conditions, an electronic actuator capable of adjusting the air metering device between its maximum and minimum operating conditions, ~~and~~ a switch configured to selectively enable and disable the electronic actuator from operating the air metering device between its maximum and minimum operating conditions, and a controller configured to operate in at least first and second modes, the controller being configured to disengage the actuator from the metering device, in the first mode, when the engine is operating at a speed above idle speed. - -

Claim 15 has been canceled.

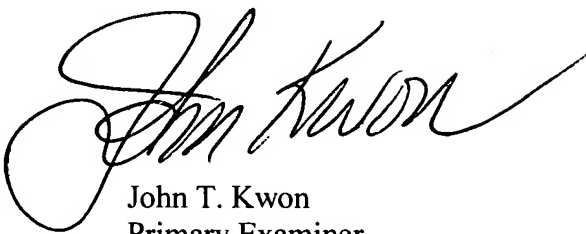

Claim 19 has been replaced by -- 19. An engine comprising an engine body defining a combustion chamber therein, an induction system configured to guide air to the combustion chamber, an air metering device configured to meter an amount of air flowing through the induction system toward the engine body, the air metering device including a mechanical interface and an electronic actuator, each of which are configured to adjust the air metering device between its maximum and minimum operating conditions, and means for selectively disengaging the mechanical interface and the electronic actuator from the air metering device, the means for selectively disengaging comprising a controller configured to operate in at least first and second modes, the controller being configured to disengage the actuator from the metering device, in the first mode, when the engine is operating at a speed above idle speed. - -
